

TMN Wheelchair Robot

Advanced Robotic Engineering... for Advanced Independence

MobilityWorks is proud to present the TMN Robot. This unique automated system stows a wheelchair in the trunk of an automobile, retrieves it by activating a remote control device in the car and then delivers the chair to the driver's door. When the chair is disengaged, the robot arm returns to the trunk and the trunk or hatch automatically closes. The TMN Robot requires no structural modifications and can be used with most foldable or rigid frame wheelchairs in a variety of autos, SUVs and minivans.

TMN Robot Features

- Automated easy-to-use push button operation for wheelchair stowing
- Suitable for sedans, SUVs and minivans meeting dimension requirements
- Custom programming adjusts the robotic arm movement to the vehicle
- Simple to operate with push-button operation
- No external changes to the vehicle (inside trunk/storage area only)
- Minimal maintenance required
- Robot can be reinstalled to another suitable vehicle if necessary

*From your trunk to your door...
 in less than a minute!*

The TMN Robot has been providing independent wheelchair stowing worldwide for over ten years!

About MobilityWorks

MobilityWorks offers new and pre-owned accessible vans, wheelchair lifts, scooter lifts and adaptive equipment from quality manufacturers such as Braun, Bruno, Freedom, EMC, EZ Lock, Viewpoint and VMI. The addition of the TMN Robot rounds out our adaptive vehicle offerings to provide our clients with unprecedented independence and mobility.

Visit one of our 13 van showroom locations and experience the outstanding customer service provided by our courteous mobility consultants. We'll help you find the right adaptive equipment or vehicle for your specific requirements.
